

AuDimix

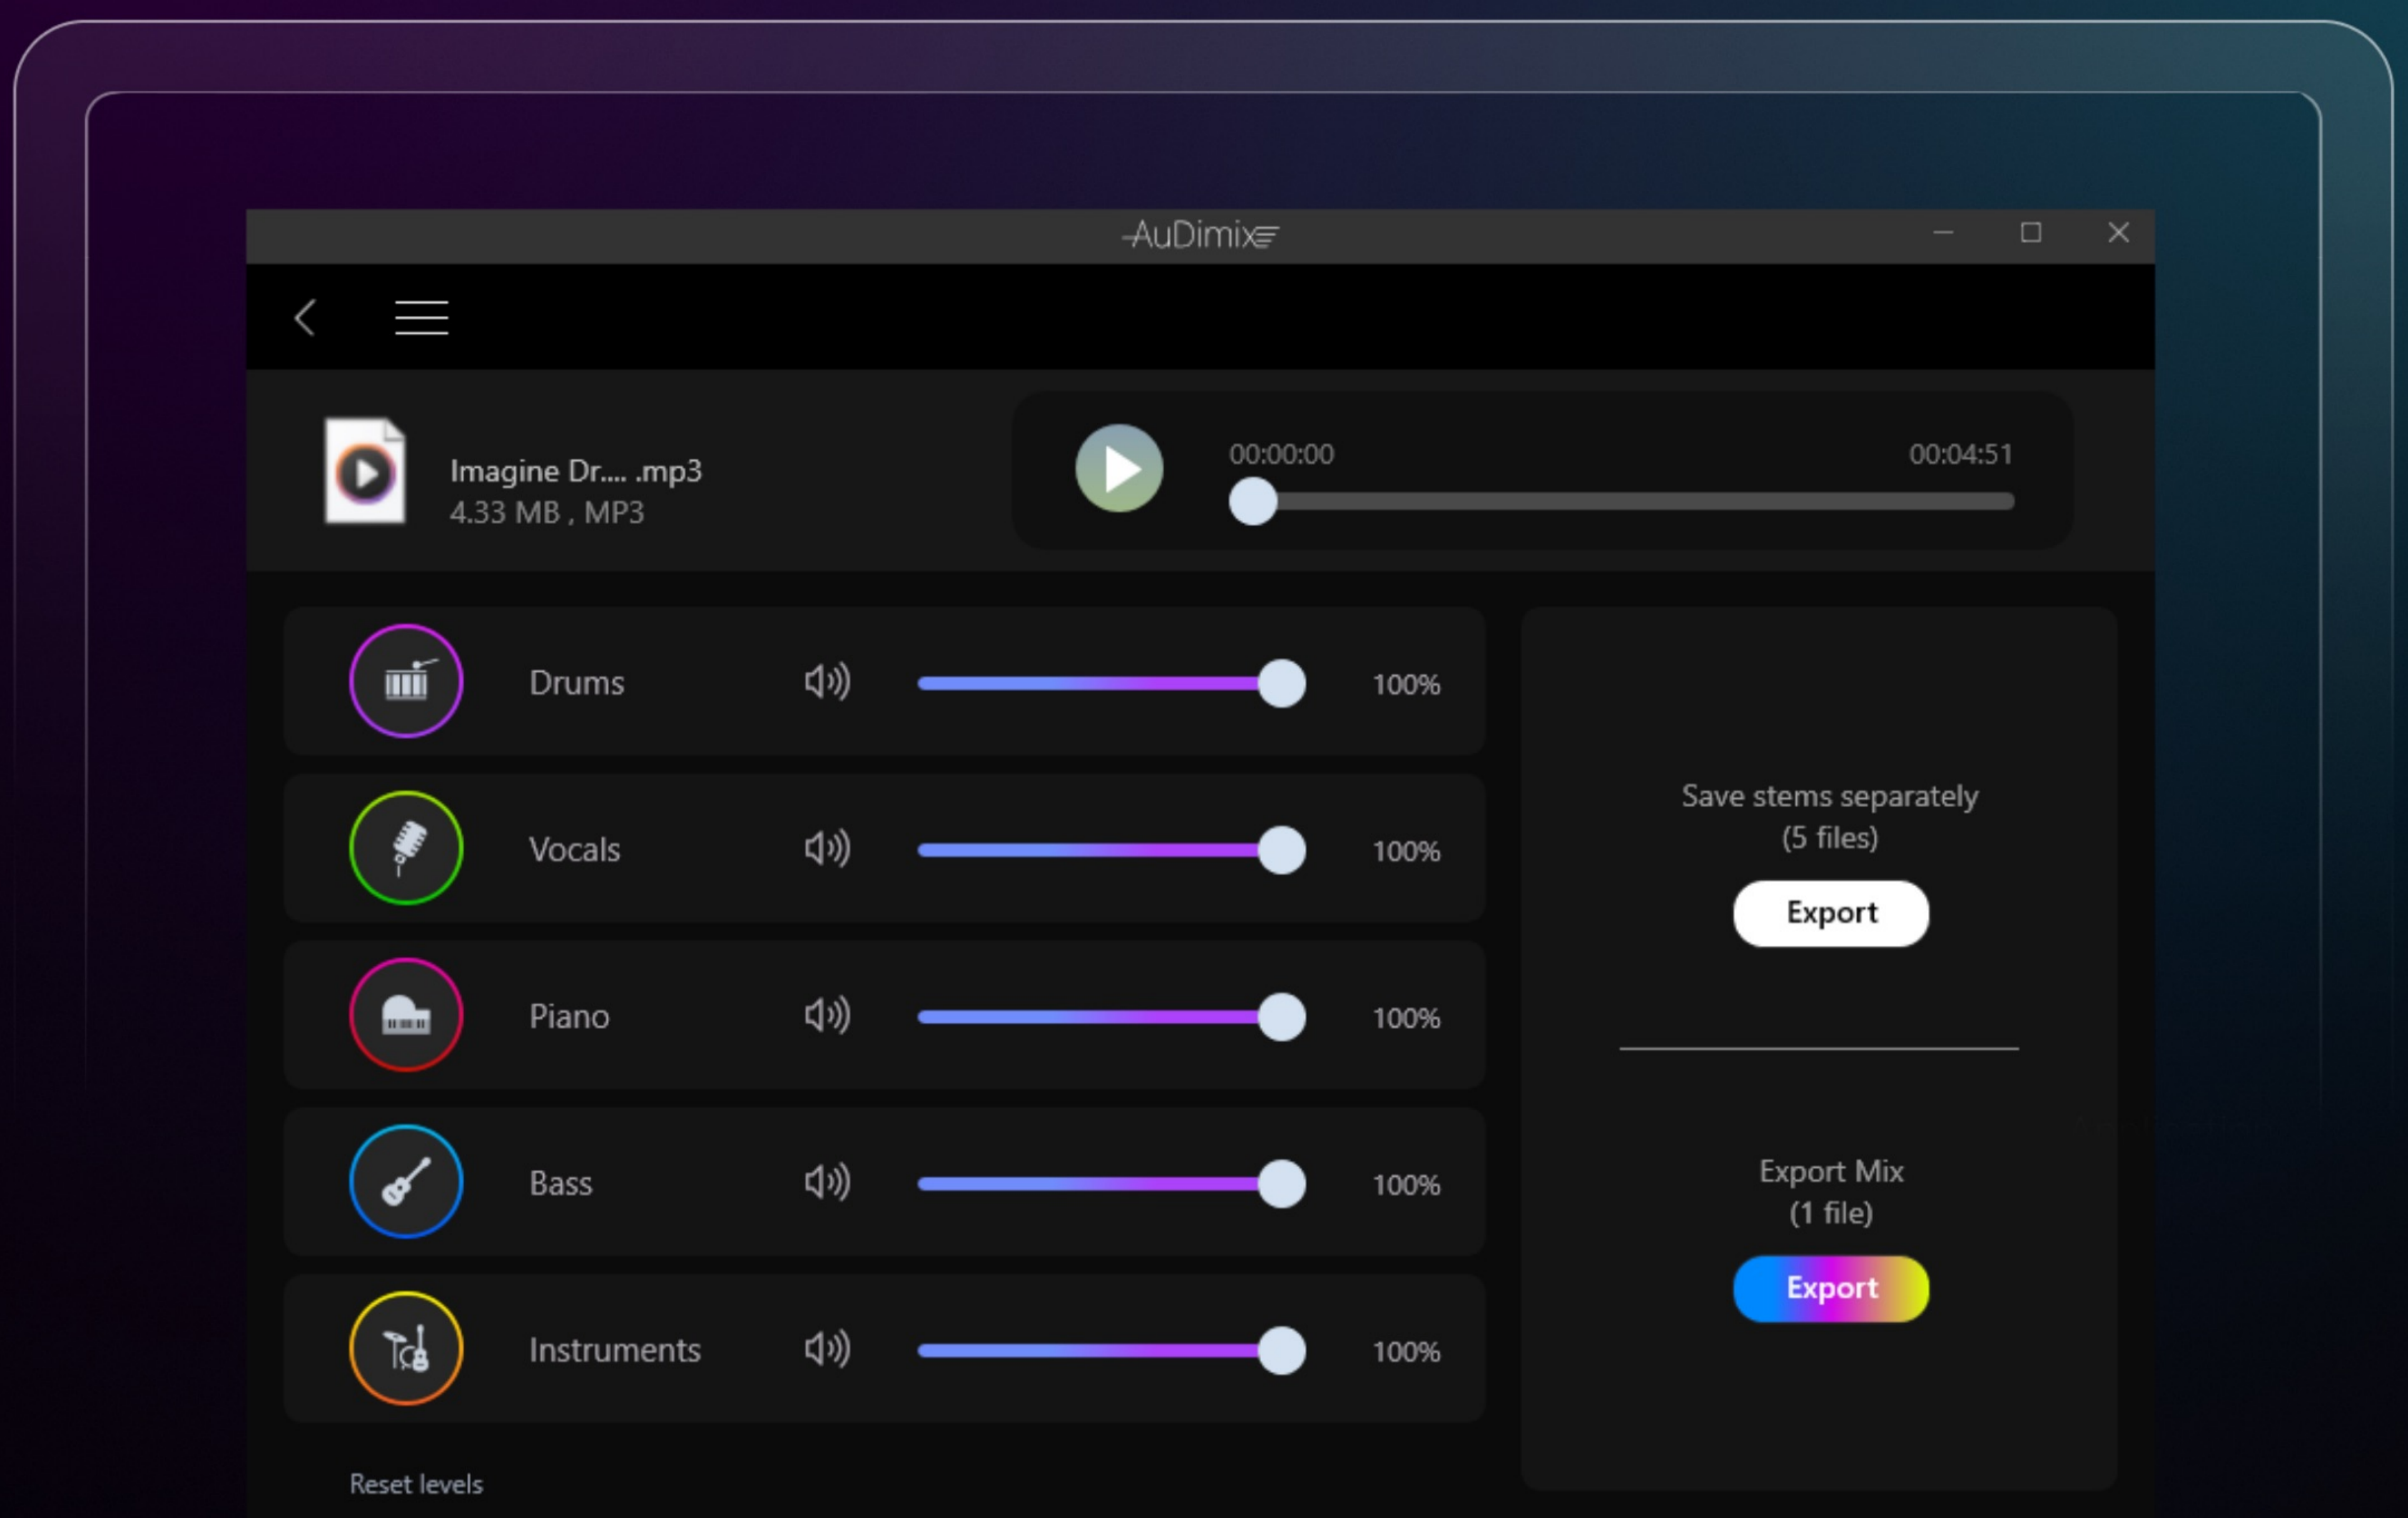

One track, limitless creativity

Supports Windows 11 & Windows 10

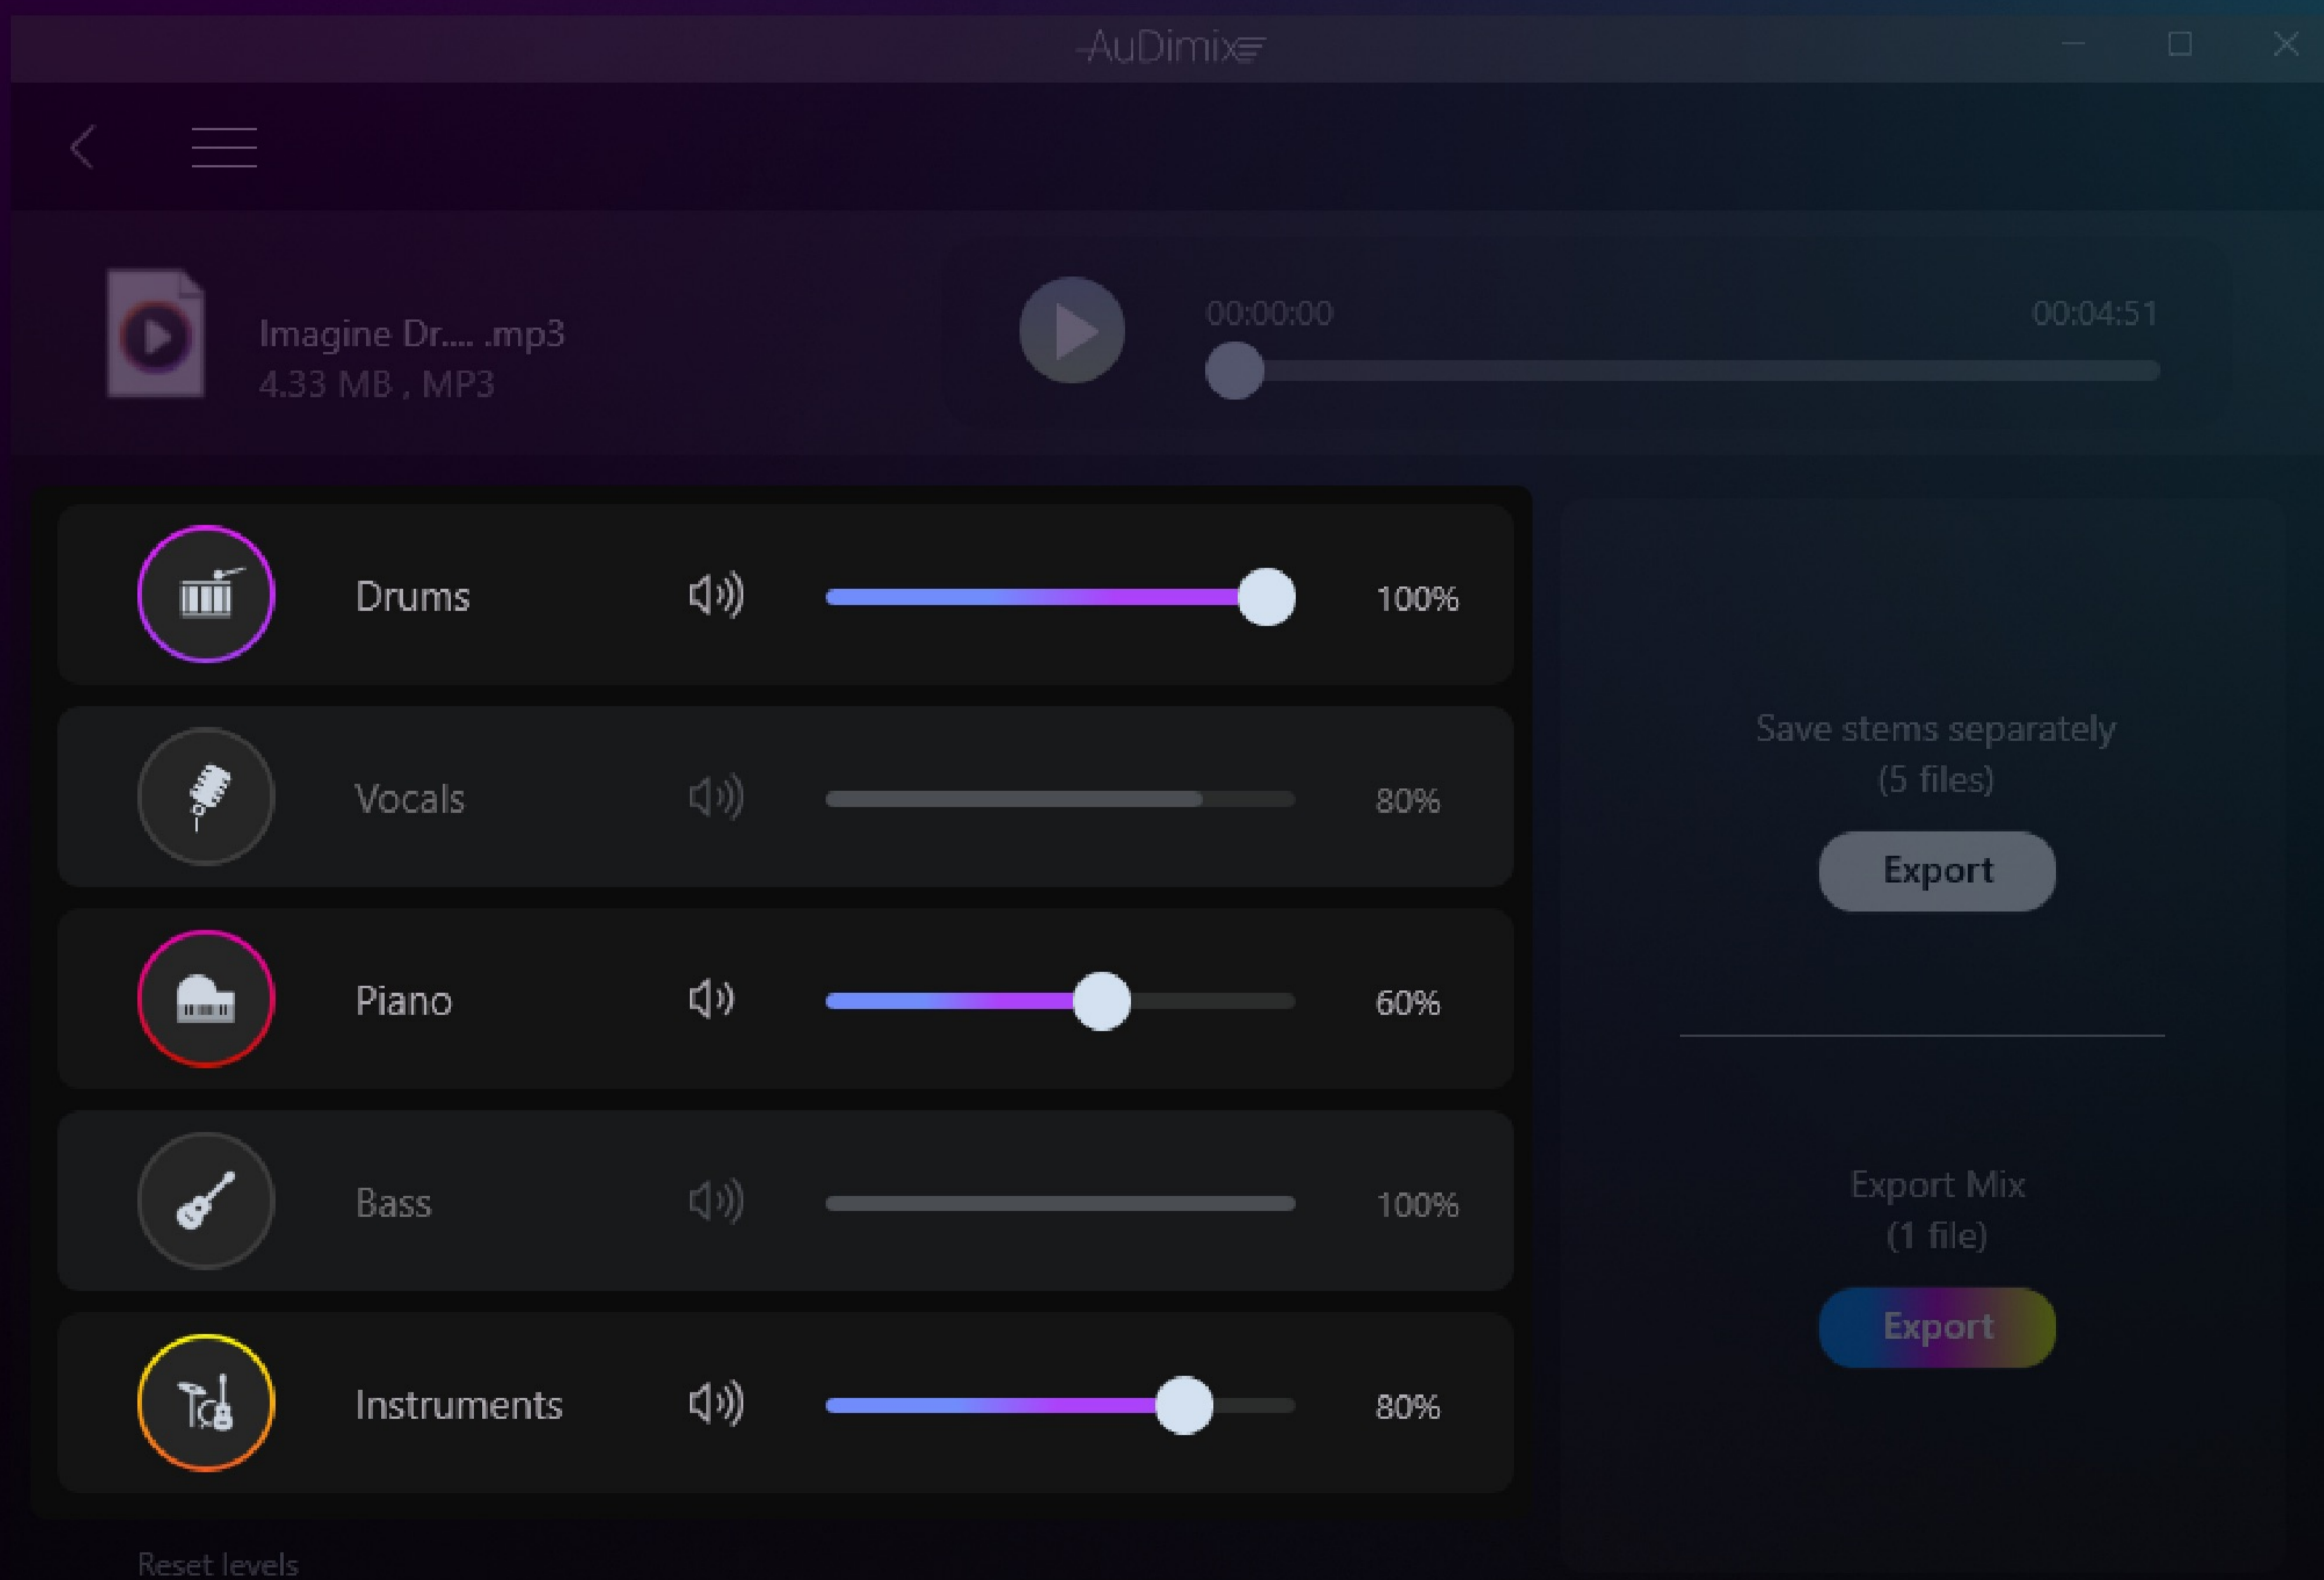

What is AuDimix?

AuDimix is a music track splitter app that allows you to split stems of any song to practice, perform, and create music. The app is powered by AI, and accurately separates the different stems from any song. This can be useful in a variety of scenarios such as needing sections of a song to practice an instrument to, removing vocals to create backing tracks, creating your own samples from a song to add to your mix, and so much more.

Stem Separation

AuDimix helps you separate different backing instruments and vocals of music composition. Stem separation is the process of separating Drums, Vocals, Piano, Bass and Backing Instruments into individual tracks. This technique is commonly used in music production and remixing to isolate specific elements and manipulate them independently.

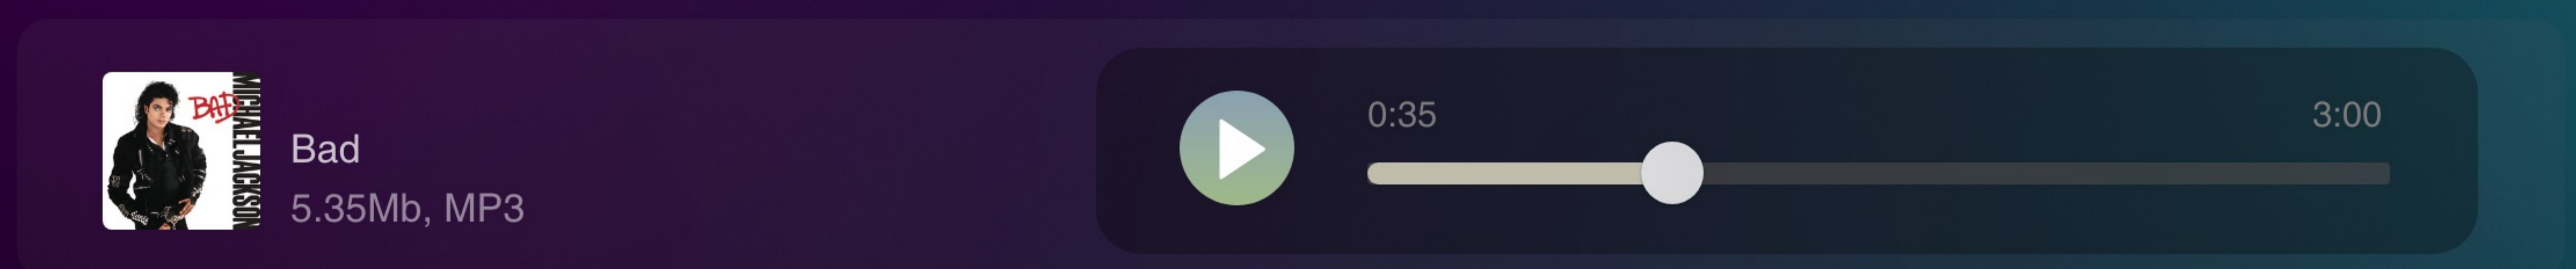

The screenshot displays the AuDimix software interface. At the top, the window title is '-AuDimix'. Below the title bar, there is a navigation menu with a back arrow and a hamburger menu icon. The main area shows a file named 'Imagine Dr....mp3' with a size of 4.33 MB and format MP3. A play button and a progress bar (00:00:00 to 00:04:51) are visible. Below the file information, there are five stem separation controls, each with an icon, a name, a speaker icon, a volume slider, and a percentage value:

Instrument	Volume	Percentage
Drums	100%	100%
Vocals	80%	80%
Piano	60%	60%
Bass	100%	100%
Instruments	80%	80%

At the bottom left, there is a 'Reset levels' button. On the right side, there are two export options: 'Save stems separately (5 files)' with an 'Export' button, and 'Export Mix (1 file)' with an 'Export' button.

● Live Playback

AuDimix offers a live preview feature that allows you to carefully observe your audio creation. With live preview, you can hear your edits and make adjustments as needed to achieve the perfect sound. This feature provides a more efficient and precise editing experience, allowing you to fine-tune your track with ease.

Export

Save stems separately

This option enables you to save all five stems separately. Click 'Export' to save all stems.

Export Mix

This option enables you to create a complete mix out of the stems and export it as a single track.

Save stems separately
(5 files)

Export

Export Mix
(1 file)

Export

AuDimix is **free** to try.

Requirements

OS: Windows 11 & Windows 10 version 18362.0 or higher

Architecture: x64

RAM: 8 GB
